Quality of life

Convenient, quiet, efficient

NILFISK®

Tired of towing your vacuum cleaner around?

Simply plug the hose into any of the wall sockets; the vacuum unit starts automatically. Another smart detail is the VacPan. Just sweep the small debris into the VacPan and they are vacuumed away.

Imagine a vacuum cleaner that is easy to use, highly efficient and almost silent; one that you don't have to carry upstairs; won't bump into the furniture or walls, get stuck in corners and that expels its exhaust air outdoors. It does exist – the Nilfisk central vacuum cleaner. The powerful vacuum unit can be located in the loft or garage; out of sight and even out of mind, as you will probably only have to empty the dust bag a few times per year – the larger models can even be used without any bag at all – and the unobtrusive, closed-circuit pipe system means that even the smallest particles of dust and dirt are transported out of the house – a cleaner home. A cleaner home and improved air quality are especially important in a home with children, pets or anyone suffering from allergies.

Discreet and unobtrusive installation

EASY TO INSTALL

Nilfisk central vacuum cleaners are just as easy to install in existing houses as new-build. Easy-to-follow instructions are included with every installation set. Simply decide where to locate the central unit (garage, loft, basement for instance) and where you want your wall sockets. It only takes one day to install a central vacuum cleaner system in an average-sized house.

Your local Nilfisk dealer will be happy to help with tips and good advice.

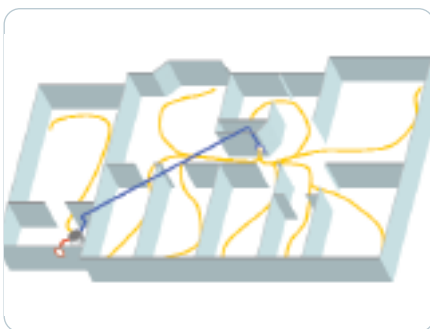

Installation kit

Pipe kit with wall inlets

Accessory kit with hose

HANDY EVERYWHERE

The lightweight and easy-to-use hose is often sufficient for an entire floor of a house. Hoses in various length and hoses with remote control are available.

The model with Radio Remote Control (RRC) is even easier to use - simply press the on/off button in the bent end to start. For installation you don't need low voltage wires in pipes or hose. This gives you the freedom to choose between five different standard hoses.
